01

Overview

PaySolutions Payment Gateway module enables your Odoo e-commerce store to accept payments through Thailand's leading payment channels. This module provides seamless integration with PaySolutions' payment infrastructure, supporting multiple payment methods popular in the Thai market.

Why Choose PaySolutions?

- **Comprehensive Thai Payment Support:** Accept payments through channels Thai customers prefer.
- **Secure Processing:** PCI-DSS compliant payment processing
- **Real-time Updates:** Webhook-based architecture for instant payment confirmation
- **Flexible Reconciliation:** Supports automatic invoice reconciliation or manual approval workflow

02 Features

Supported Payment Channels

- PromptPay QR Code - Thailand's national QR payment standard
- Credit/Debit Cards - Visa, Mastercard, JCB, UnionPay, American Express
- Internet Banking - SCB, KBank, Bangkok Bank, Krungsri, KTB and TTB
- E-Wallets - Alipay, WeChat Pay, TrueMoney Wallet, PayPal

Key Capabilities

- Multi-currency support (THB, USD, EUR, GBP, JPY, SGD, HKD, AUD, CHF)
- Multi-language support (Thai, English, Japanese)
- Real-time payment notifications via webhooks
- Comprehensive transaction logging
- Mobile-friendly payment pages
- PCI-DSS compliant (no card data stored in Odoo)

03 System Requirements

Odoo Requirements

- Odoo Version: 17.0, 18.0 and 19.0
- Modules: payment (core payment module - automatically installed)
- Database: PostgreSQL 12 or higher

Server Requirements

- PHP/Python: Python 3.8+
- SSL Certificate: Required for production (webhooks require HTTPS)
- Public URL: Server must be accessible from internet for webhook delivery

PaySolutions Account Requirements

- Active PaySolutions merchant account
- Merchant ID
- Secret Key
- API Key
- Webhook configuration access

04 Installation

Download the Module

Install module from Odoo App Store

For detailed step-by-step instructions, you can watch the official Odoo video tutorial: [How to Download and Install Module From Odoo App Store](#)

1. Go to [Pay Solutions Payment Provider | Odoo App Store](#)
2. Select your Odoo version (17.0, 18.0 and 19.0)

Choose the installation method that best suits your setup:

Option A: Install from Odoo.sh (Recommended)

Video Tutorial:

- [Deploy Module Using Odoo.sh](#)
- [Odoo.sh Configuration Guide](#)

Quick Installation Steps:

1. Deploy from App Store

- 1.1. On the App Store page, click **Deploy on Odoo.sh** button
- 1.2. Select your Odoo.sh project
- 1.3. Select the branch you want to install (e.g., production, staging)
- 1.4. App will be deployed automatically

2. Activate the Module

- 2.1. Go to your Odoo.sh branch
- 2.2. Click **Connect** to access your instance
- 2.3. Navigate to **Apps** menu
- 2.4. Search "**Pay Solutions**" or "**paysolutions**"
- 2.5. Click **Install**

3. Verify Installation

- 3.1. Go to **Accounting** → **Configuration** → **Payment Providers**
- 3.2. PaySolutions should appear in the list

Option B: Manual Installation (Self-hosted)

Prerequisites

- Access to Odoo server
- Permission to restart Odoo service
- SSH access (for Linux servers)

Additional Guide: [Install Custom Module in Odoo](#)

Odoo Documentation: [Odoo Apps and Modules Guide](#)

Installation Steps:

1. **Download Module**
 - 1.1. Click **Download** button on App Store
 - 1.2. Save the ZIP file
2. **Extract to Addons Directory**
 - 2.1. Extract ZIP to your Odoo addons folder
3. **Set Permissions** (Linux only)
 - 3.1. Ensure Odoo user has read/write access to the module folder

4. Restart Odoo Service

4.1. Restart your Odoo server

5. Update Apps List

5.1. Enable **Developer Mode** (Settings)

5.2. Go to **Apps** → **Update Apps List**

6. Install Module

6.1. Remove "Apps" filter

6.2. Search "**Pay Solutions**" or "**paysolutions**"

6.3. Click **Install**

7. Verify Installation

7.1. Accounting → Configuration → Payment Providers

7.2. PaySolutions should appear

Update module new version

Odoo.sh:

- Upgrade button appears automatically in Apps menu

Self-hosted:

- Download new version → Replace files → Restart → Upgrade in App

05 Initial Configuration

Step 1: Obtain PaySolutions Credentials

Before configuring, you need:

Merchant ID - Your unique merchant identifier
Secret Key and API Key - API secret for secure communication
Post Back URL - Will be configured in PaySolutions dashboard

Contact PaySolutions support to get your credentials.

Step 2: Enable Payment Provider

1. Navigate to **Website** → **Configuration** → **Payment Providers**
2. Find **Pay Solutions** in the list
3. Click to open the configuration

Step 3: Configure Basic Settings

New Payment Providers Pay Solutions Published PaySolutions Transactions Check Status Now 18 / 18

Pay Solutions

State ? ☐ Disabled ☒ Enabled ☐ Test Mode

Credentials Configuration Messages

PAYSOLUTIONS CONFIGURATION

Merchant ID ?	92361090	Webhook URL ?	https://your-domain.com/payment/paysolutions/webhook
Secret Key ?		Return URL ?	https://your-domain.com/payment/paysolutions/return
API Key ?			

Webhook URL: Copy this URL to your PaySolutions merchant dashboard.
Return URL: Copy this URL to your PaySolutions merchant dashboard.

General Tab:

- Name: PaySolutions (default)
- State: Set to **"Enabled"**
- Company: Select your company

Credentials Tab:

- Merchant ID: [Enter your PaySolutions Merchant ID]
- Secret Key: [Enter your PaySolutions Secret Key]
- API Key: [Enter your PaySolutions API Key]

Step 4: Configure Webhook URL and Return URL

Your webhook and return URL is automatically generated:

<https://yourdomain.com/payment/paysolutions/webhook>
<https://yourdomain.com/payment/paysolutions/return>

Important: This URL must be HTTPS in production!

To configure in PaySolutions Dashboard:

1. Login to PaySolutions Merchant Portal
2. Go to **Merchant Setting** → **Return Parameter**
3. Add your webhook URL as "**Post Back URL**"
4. Add your return URL as "**Return URL**"
5. Save configuration

Step 5: Enable Online Payment in Sales settings

06 Multi-Currency Configuration

Enable Multi-Currency

1. Go to **Accounting** → **Configuration** → **Settings**
2. Under **Currencies** section, enable **Multi-Currencies**
3. Click Add a **Currency**
4. Activate currencies you want to support (e.g., USD, EUR, JPY)

Configure Currency Rates

PaySolutions uses real-time exchange rates, but you should configure base rates:

1. Go to **Accounting** → **Configuration** → **Currencies**
2. For each currency, click **Edit**
3. Set **Current Rate** relative to THB
4. Enable **Automatic Currency Rates** for daily updates

PaySolutions Currency Support

Supported Transaction Currencies:

- THB (Thai Baht) - Primary
- USD (US Dollar)
- EUR (Euro)
- GBP (British Pound)
- JPY (Japanese Yen)
- SGD (Singapore Dollar)
- HKD (Hong Kong Dollar)
- AUD (Australian Dollar)
- CHF (Swiss Franc)

Note: Settlement is typically in THB. Check with PaySolutions for multi-currency settlement options.

07 Payment Flow in Odoo

The PaySolutions Payment Gateway module integrates seamlessly with Odoo 18's native payment framework, allowing customers to complete payments instantly from multiple entry points.

1. Payment from Sales Order (SO)

- 1) Generate a payment link from a confirmed Sales Order
- 2) Copy the link and send it to the customer manually, or include it in an **E-mail** template

3) **Send by Email:** copy payment URL and send to customer directly.

4) Add on the **terms and conditions** section.

The screenshot shows the Odoo Quotation S00033 form. The 'Terms and Conditions' section is highlighted with a red box. It contains the following text:

Terms: <https://ktchs-pay-solutions.odoo.com/terms>

Payment URL: <https://odoo-payment-link.com/payment/pay?>

The form also displays the customer information, invoice address, delivery address, and a table of order lines. The total amount due is 7,854.00 B.

Product	Quantity	UoM	Unit Price	Taxes	Disc.%	Amount
BF&MF Shop	10.00	Units	714.00		0.00	7,140.00 B

Summary:

- Untaxed Amount: 7,140.00 B
- Total: 7,140.00 B
- Margin: 7,140.00 B (100%)

- 5) Customer selects preferred channel (e.g., PromptPay, Credit Card, Internet Banking)

- 6) When the customer completes payment, Odoo automatically reconciles the transaction once the webhook confirmation is received

⚠ Note: Payment confirmation may take a few seconds to reconcile.

2. Payment from Customer Invoice

Odoo automatically links invoices with PaySolutions.

Steps:

- 1) Go to **Accounting** → **Customer Invoices**
- 2) Open an invoice with state "Posted"
- 3) Click "Generate Payment Link"

- 4) The customer completes payment using PaySolutions

- 5) Once the webhook confirms success, the invoice is automatically marked as **In payment**, The store will then need to manually reconcile it to change the status from **In Payment** to **Paid**.

- 6) Odoo automatically updates order and invoice status

08 Transaction Reconciliation and Monitoring

Automatic Reconciliation

When PaySolutions confirms a successful payment via webhook, Odoo automatically:

1. Updates the transaction status to **Done**
2. Marks the related invoice as **In payment**
3. Creates and reconciles a payment entry in Accounting

If the webhook is delayed, the transaction will remain in **Pending** state until confirmation is received.

Pending Transaction Handling

To maintain data integrity, the module includes an automated process to handle stuck transactions.

Cron Job: Pending Transaction Checker

A scheduled job runs periodically (every 15 minutes) to detect transactions that remain in Pending state for too long.

Process Logic:

- If a transaction has been in "Pending" for more than **30 minutes**
- And no successful webhook has been received → The transaction status is automatically updated to **Error**

This ensures that outdated or incomplete transactions do not remain in the system indefinitely.

Location: (Turn on developer mode)

Technical → Scheduled Actions → PaySolutions: Check Pending Transactions

You can adjust the interval and time threshold from the scheduled actions menu if needed.

Priority	Action Name	Model	Next Execution Date	Interval ...	Interval Unit	A...
5	PaySolutions: Check Pending Transactions	Payment Transaction	02/02/2026 15:00:43	15	Minutes	☒

⚠ Important for Odoo 17.0:

For **Odoo version 17.0**, you must **manually activate** the cron job after installation.

```

Settlement and Final Reconciliation

Payments processed through PaySolutions are confirmed via asynchronous webhook. Upon confirmation, Odoo records the payment and updates the invoice status to **In Payment**.

Why invoices are not automatically marked as "Paid"

Because settlement funds are not transferred directly to the merchant's bank account in real time, Odoo cannot automatically finalize the transaction.

Required Merchant Action

1. Review the incoming payment record in Odoo
2. Match it with the corresponding bank statement or clearing account
3. Complete the reconciliation in Accounting

Once reconciliation is complete, Odoo updates the invoice status to **Paid**.

Important: This workflow ensures accuracy in financial reporting and prevents discrepancies between Odoo records and actual settlement amounts received from PaySolutions.

Reconciliation Timing

Stage	Typical Duration
Payment completion to webhook	5–30 seconds
Maximum delay (network latency)	1–2 minutes

Auto Reconciliation

The PaySolutions payment provider uses Odoo's standard payment reconciliation workflow. When configuring the payment method in the Bank Journal, the **Outstanding Receipts Account** (shown as **101403 Outstanding Receipts** in your configuration) plays a critical role in automatic invoice reconciliation.

Accounting > Configuration > Journal

Two Configuration Options

Option 1: Outstanding Receipts Account (Default)

Account: 101403 Outstanding Receipts

Behavior:

- Payment recorded to clearing account
- Invoice status: **"In Payment"** (NOT fully paid)
- Requires **manual reconciliation** with bank statement

-
- Journal entry:

Debit: Outstanding Receipts
Credit: Accounts Receivable

Use when: You need to manually verify payments before finalizing.

Option 2: Bank Account (Recommended for Auto Reconciliation)

Account: 101401 Bank

Behavior:

- Payment recorded **directly to bank**
- Invoice status: "**Paid**" automatically
- **No manual reconciliation** needed
- Journal entry:

Debit: Bank Account
Credit: Accounts Receivable

Use when: You trust PaySolutions webhook and want automatic processing.

Quick Action Buttons

Two convenient buttons are available at the top of the Pay Solutions Payment Provider configuration page

- **PaySolution Transactions button:** View and manage all payment transactions made through PaySolutions gateway
- **Check status now button:** Manually check the current status of pending transactions from PaySolutions

Payment Transactions Page

The Payment Transactions page provides comprehensive tools for monitoring and troubleshooting individual transactions.

Verify Payment Status (PaySolutions) Button

Location: Top of each transaction detail page

Purpose: Manually verify the current payment status directly from PaySolutions gateway

When to use:

- Transaction status appears stuck or uncertain
- Need to confirm payment completion immediately
- Investigating payment issues or discrepancies

What it does:

- Sends a real-time status inquiry to PaySolutions
- Updates transaction status based on gateway response
- Displays result in the Message Status tab

Message Status Tab

Purpose: Shows the current payment status message and communication history

What you'll see:

- Current payment status message (e.g., "PaySolutions Payment completed successfully")
- Status updates from webhook notifications
- Manual status check results
- Payment confirmation messages

Use this tab to:

- Quickly check if payment was successful
- View the latest status message from PaySolutions
- Verify payment completion confirmation

Payment COMPLETED (status=CP, name=)

Best Practices

For Regular Users:

1. Use **Message Status** tab for quick status checks
2. Use **Verify Payment Status** button when status seems delayed

For Administrators:

1. Enable **Developer Mode** when investigating issues
2. Check **Logs** tab for complete event history
3. Review **PaySolutions Details** for gateway-specific information
4. Use logs to identify webhook delivery problems

For Support/Debugging:

1. Always check **Logs** tab first when troubleshooting
2. Look for webhook received entries to confirm gateway communication
3. Compare **Message Status** with **PaySolutions Details** for consistency
4. Share log entries when contacting support

Developer Mode: Advanced Configuration (For Technical Users Only)

API Configuration Fields

When **Developer Mode** is **enabled**, additional configuration fields become visible and editable on the PaySolutions provider page:

The screenshot shows the 'Pay Solutions' configuration page. At the top, there's a 'New' button and a 'Payment Providers' section. Below that, the 'Pay Solutions' title is followed by a 'Code' field with the value 'PaySolutions'. The 'State' is set to 'Enabled' (radio button selected). There are tabs for 'Credentials', 'Configuration', and 'Messages'. The 'Configuration' tab is active, showing a table of configuration fields. The 'API URL' and 'Payment URL' fields are highlighted with a red box. Below the table, there are instructions for the 'Webhook URL' and 'Return URL'.

PAYSOLUTIONS CONFIGURATION	
Merchant ID ?	92361090
Secret Key ?	
API Key ?	
API URL ?	https://apis.paysolutions.asia
Payment URL ?	https://payments.paysolutions.asia/payment
Webhook URL ?	https://your-domain.com/payment/paysolutions/webhook
Return URL ?	https://your-domain.com/payment/paysolutions/return

Webhook URL: Copy this URL to your PaySolutions merchant dashboard.
Return URL: Copy this URL to your PaySolutions merchant dashboard.

Critical Configuration Fields

These fields are **visible and editable in Developer Mode** but should **NOT** be modified unless you fully understand their purpose:

API URL

Default: <https://apis.paysolutions.asia>

Test URL: <https://stg-apis.paysolutions.asia>

Purpose: PaySolutions gateway API endpoint for processing payments

⚠ Warning: Do not modify this URL unless you want to test

Payment URL

Default: <https://payments.paysolutions.asia/payment>

Test URL: <https://payments.paysolutions.io/payment>

Purpose: PaySolutions payment page where customers complete their transactions
